

Erosion Control Acknowledgement Form and Supplement to Small Parcel Stormwater Site Plan

I, the undersigned, am aware of the City of Lynden's regulations concerning control of erosion from construction sites. I understand that:

1. It is my responsibility to keep the public right-of-way in a clean and serviceable condition. Mud, dirt or debris is not to be tracked off my site; and in the event some material is inadvertently deposited on the roadway, it is to be promptly swept and removed.
2. It is my responsibility to prevent the contamination of drainage systems with sediment, debris or any material that would result in a violation of State or Federal Water Quality Standards. It is understood that methods and measures to control contamination or its potential may be required by the City of Lynden's Public Works Department.
3. It is my responsibility to manage runoff and construction garbage/debris from this site in such a manner that adjacent properties are not adversely affected.
4. A lack of compliance with the above performance standards may result in an order to stop work, revocation of permits and/or an assessment for damages and penalties resulting from lack of compliance.

Builder is responsible for Erosion and Sediment Control per Stormwater Management Manual for Western Washington.
